

NOVOX

Novox Pop Filter

If you're recording, live streaming, podcasting, or anything else that involves speaking up close into a microphone, you've encountered the effects of "plosives" – those loud noises and pops that result from strong sounds like P, B, T, and D – as well as the unwanted breathing noise from a singer or speaker.

Novox Pop Filter protects your microphone from unwanted noise and acoustic distortion from plosives and other extraneous sounds. Novox Pop Filter consists of a high-quality acoustic filter mounted on a flexible gooseneck that can be easily attached to most standard microphone stands, and effortlessly adjusted to the position of the microphone and the speaker or singer. While it is designed for use with condenser microphones, a pop filter will bring some benefit to dynamic microphones as well.

Novox Pop Filter is a must-have accessory for vocalists, voiceover artists, podcasters, gamers, and live streamers, as well as home and professional recording studios, or any vocal recording session.

Bullet points:

- High-quality acoustic filter with ultra fine dual layer mesh screen
- 360-degree flexible gooseneck and universally compatible mounting clamp.
- Recommended for use with condenser microphones, also great for dynamic microphones.
- Essential for any recording environment including home studios and professional audio production facilities.
- Perfect for recording, singing, voiceover, radio, podcasting, live streaming, gaming, etc.

Specs:

- Pop filter length: 51cm
- Gooseneck length: 37cm
