

NOVOX

Novox n1000 - active PA System

Novox n1000 is a feature-rich, fully-contained powered stereo PA system that delivers 800 Watts of power through two 12-inch subwoofers and four 4-inch satellite speakers, with a built-in mixer and on-board USB/SD MP3 player with Bluetooth connectivity.

With its sleek, modern design, versatile feature set, powerful performance, and stellar sound quality, the Novox n1000 will more than meet the needs of any small to medium sized concert or event, from musical performances to weddings and celebrations, conferences or presentations. The n1000 is an ideal solution for music clubs, restaurants, hotels, conference rooms, schools, and other venues.

The built-in mixer offers four input channels: two mono microphone/line XLR inputs with separate Volume, Treble, Bass, and Echo Effect controls, and one stereo channel with L/R jack and RCA connectors, separate Volume and Effect control. The master section includes a 5-band graphic equalizer, Subwoofer Volume control with bass rolloff switch, a Master Volume control with multi-colored LED level indicator, and an RCA L/R monitor output.

The on-board media player reads MP3 files from USB flash drives and SD cards, and offers a digital display with current file information as well as full playback controls. The media player can be connected to the channel 3-4 line inputs to use the same Volume and Effect knobs. A built-in Bluetooth module enables wireless audio streaming from Bluetooth-equipped mobile devices.

Novox n1000 is a full stereo system. A master unit houses one sub, along with amplifier and mixer circuitry, with a second passive satellite sub and two 4 inch satellite speakers mounted on each sub. Double carrying handles and rugged construction ensure durable, long-lasting performance.

Novox n1000 is a great solution for permanent installation in rooms or halls, or as a mobile PA that can be easily transported and easily set up for live events. For larger events, Novox n1000 can be paired with an external mixing console for increased channel capacity.

Bullet points:

- Complete active stereo PA system including two 12" subs and four 4" satellite speakers on stands, offering 800 W of output power, a built-in mixer, USB/SD MP3 player and Bluetooth connectivity for wireless audio playback.
